

The Science Was Proven

- Neural signals are unique and repeatable
- Music and memory create recognizable brain patterns
- EEG can detect emotion, recognition, and intention

The Problem? No One Built the Stack

- No system connected neuroscience to secure authentication
- No solution used music to generate repeatable neural signals
- No deployment using consumer-grade devices

Our Breakthrough

- First scalable system for neural authentication using music + brain response
- Fully operational with off-the-shelf earbuds and glasses
- Anchored to smart contracts, sovereign identity, and satellite infrastructure

Quote for Emphasis

“We didn’t upgrade identity — we redefined it.”
